

Quella sporca dozzina [a cascata)

Davide Di Pumbo – WebAppConf 2018 </>

Ma perchè?

In the name of the "separation of concerns",
bright minds and passionate developers

but its limitations are staggering and the
designers for many years to come unless

logical failure. CSS just doesn't work as
sites use it? CSS can be used to style
it in how they use this technology. Even
artially adhere to the standard to truly be
lity and Consistency. CSS has neither. Any
plex site using CSS will tell you that all
j-

this idea that designers should spend
ime fiddling around with markup tags and
(I mean that every CSS design tool forces
tractive modern site. Many designers take
uld be design centric. PDF/postscript is a
uncately not very suitable for the web.)
tically correct postscript tags they just
sucks because it forces designers to
than how to make it work from a design

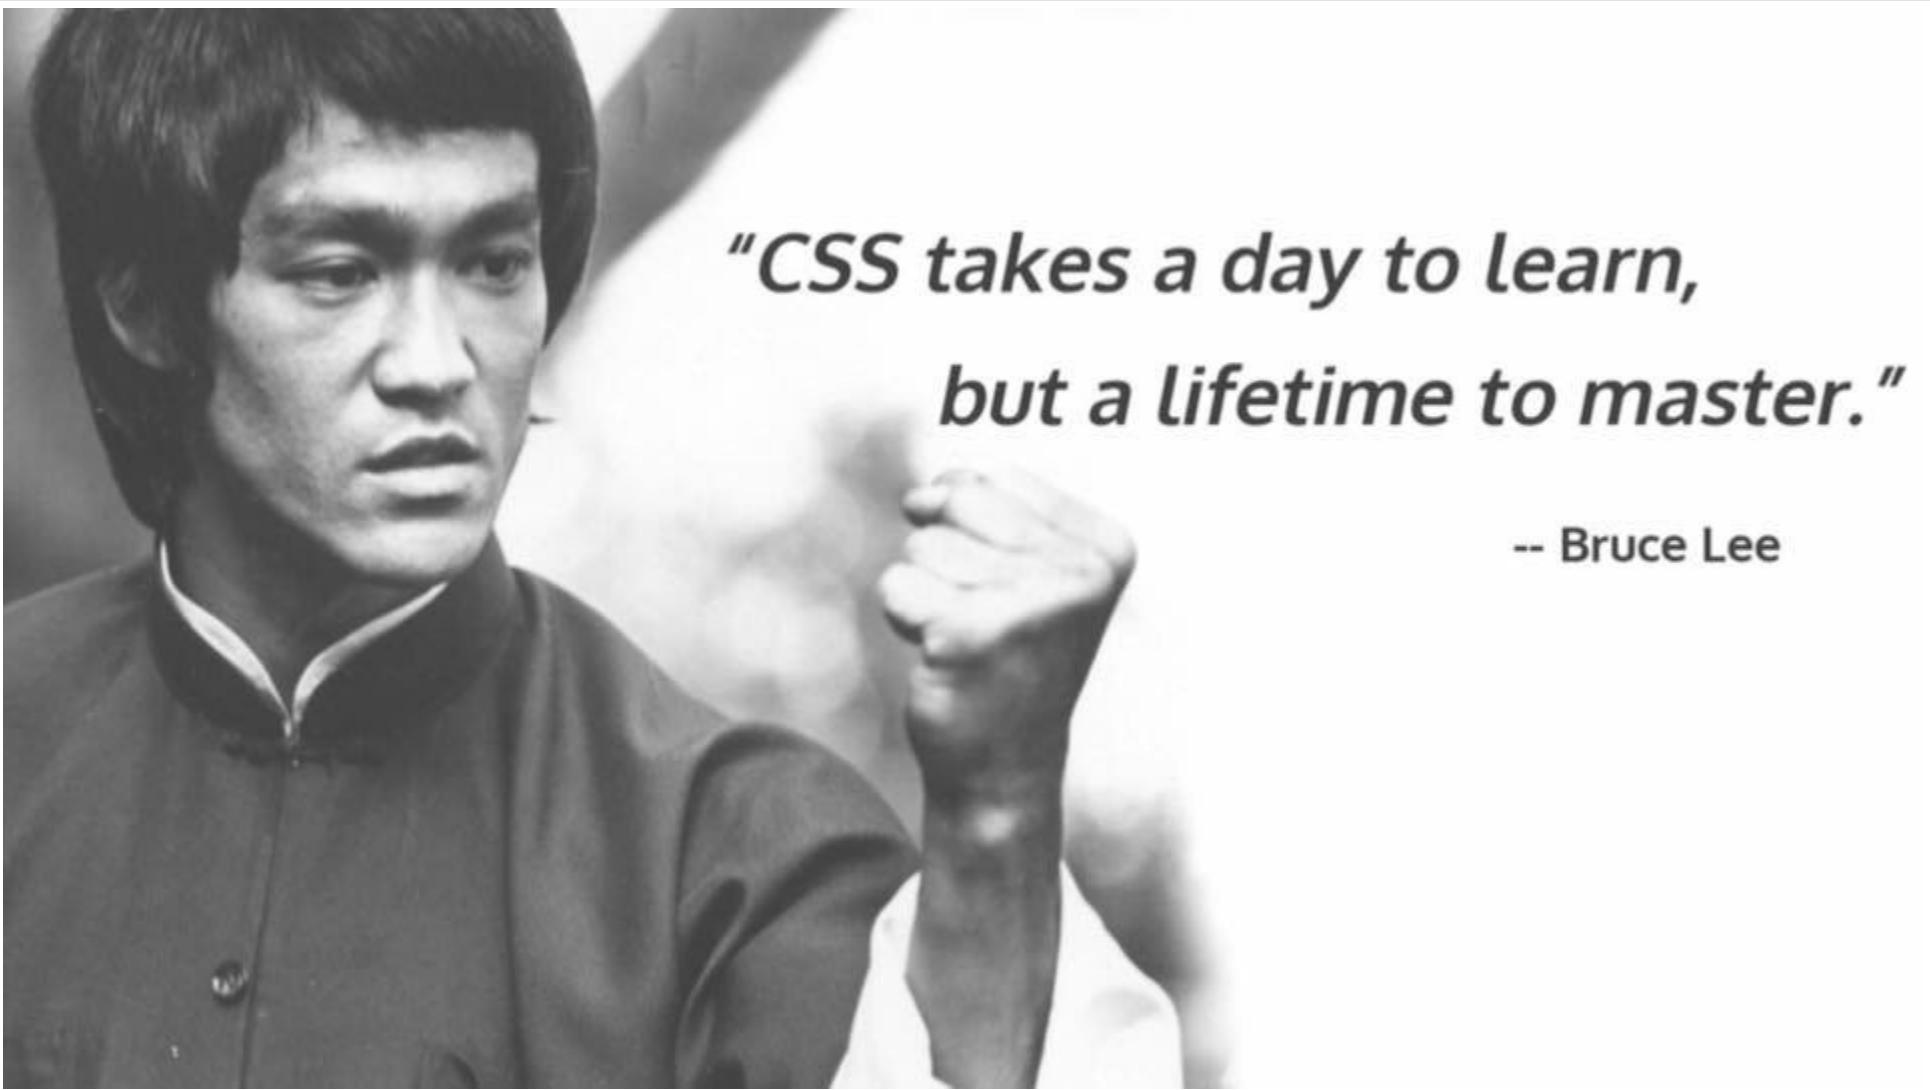

perspective.

BASTA!!1!

Make CSS great again!

Non stiamo parlando delle difficoltà del CSS

*"CSS takes a day to learn,
but a lifetime to master."*

-- Bruce Lee

A tal riguardo...

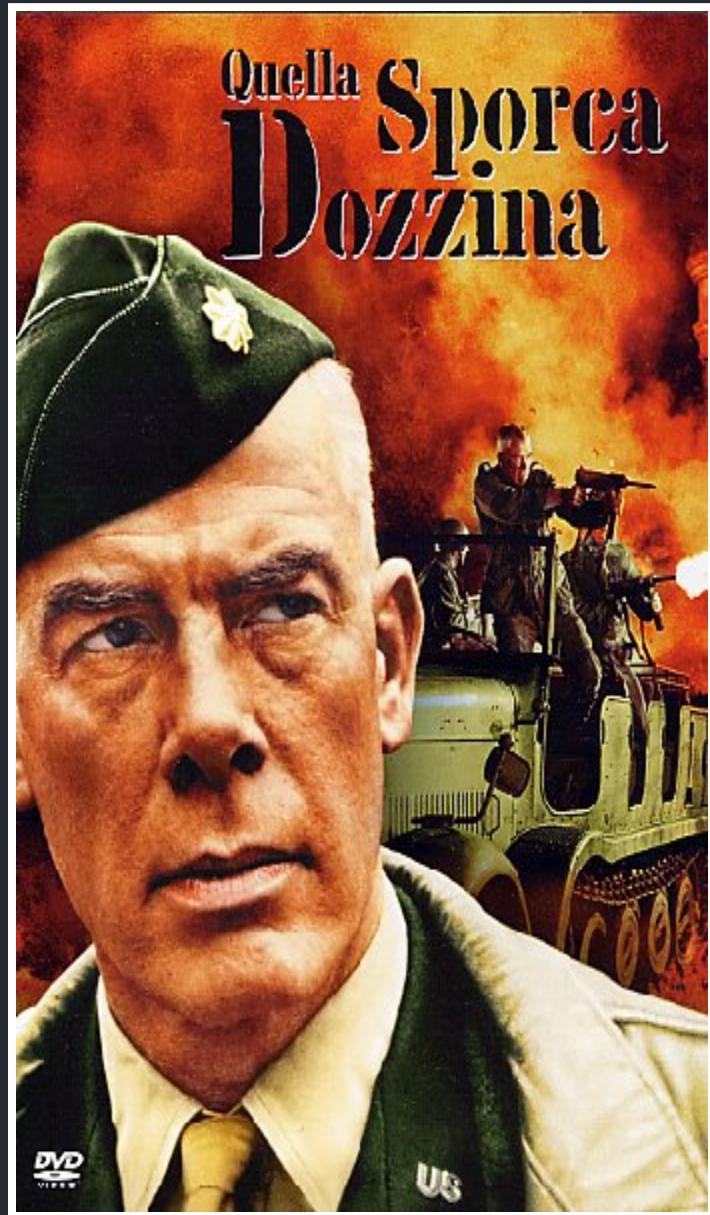

Quindi?

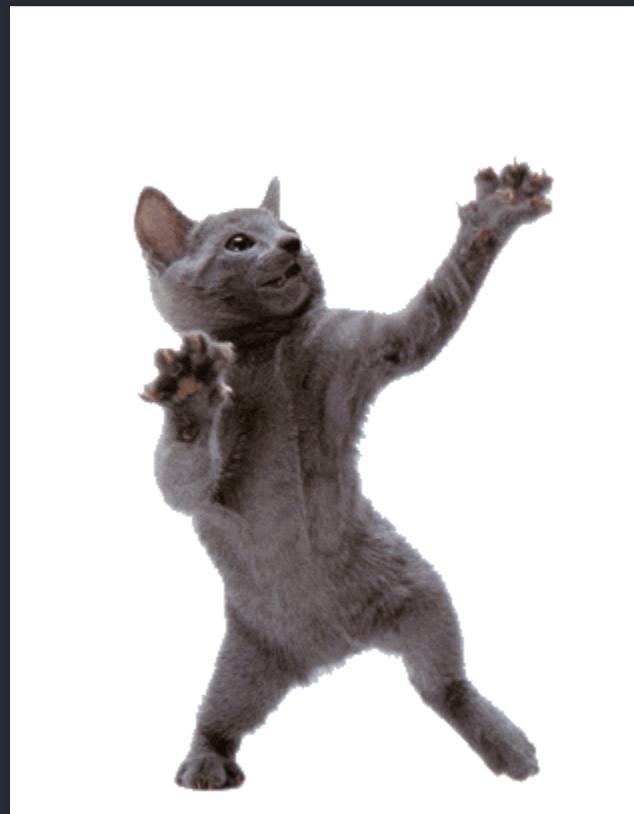

E il CSS è divertente!

Sì ma sto titolo?

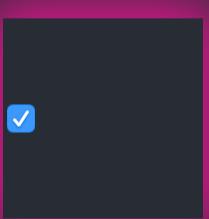

Let's start meow!!!

#1 :checked

```
input[type=checkbox]:checked {  
    box-shadow: 0 0 50px 10px #E0168F;  
}
```

```
<input type="checkbox" name="checkbox2" id="checkbox2" checked="">  
<input type="checkbox" name="checkbox3" id="checkbox3">
```

Rendiamolo interessante

Sibling combinator

sel ~ sel

```
input[type=checkbox]:checked ~ .selector {  
    background: #E0168F;  
}
```

Not checked

Demo

Checked

Demo

Ok, nella vita vera?

Custom checkbox!!!

```
<div class="cb">
  <div class="cb__cont">
    <input id="cbId1" type="checkbox" class="cb__input" checked="">
    <svg version="1.1" stroke-miterlimit="10" xmlns="http://www.w3.org/2000/svg">
      <path fill="transparent" stroke="#000000" stroke-width="4" stroke-linecap="square" d="M 10 10 L 10 20 L 20 20 L 20 10 Z"/>
    </svg>
    <div class="cb__background"></div>
  </div>
  <label for="cbId1" class="cb__label">
    What a wonderful checkbox
  </label>
</div>
```

What a wonderful checkbox

Ma praticamente potete
gestire qualsiasi stato
binario

The screenshot shows a CodePen editor interface with the following elements:

- Top navigation bar with tabs: HTML, CSS, and Result.
- Code editor area containing two sections of text, each starting with "Test Text".
- Result preview area below the code editor, which displays the same two sections of text.
- CodePen logo and "EDIT ON CODEPEN" button in the top right corner.
- A three-line menu icon in the top right corner of the result preview area.

The code editor contains the following HTML and CSS:

```
HTML:
<h1>Test Text</h1>
<div>Lorem ipsum dolor sit amet, consectetur adipiscing elit. Vivamus vulputate urna nulla, sit amet consequat dui eleifend non. Vestibulum dapibus interdum felis. Sed pellentesque placerat est non tristique. Sed lacinia tempor tortor et cursus. Fusce facilisis iaculis mi sit amet fermentum. Quisque consectetur nisl a libero porttitor tempus. Nunc feugiat consequat est, id interdum eros tincidunt eget. Phasellus condimentum ante ac tristique placerat. Proin sollicitudin nibh eget enim ultricies condimentum. Donec tristique ultrices laoreet. Donec et lacinia leo, non sodales massa. Nam libero elit, convallis et ornare sit amet, efficitur vel dolor. Suspendisse potenti.

Praesent tristique nunc in vestibulum finibus. Nullam orci leo, iaculis at nulla vitae, finibus imperdiet felis. Proin et arcu semper, imperdiet elit viverra, pretium velit. Donec sagittis eros tincidunt laoreet blandit. Duis eu nulla a tortor eleifend eleifend sed sed eros. Praesent scelerisque sapien vitae dui rutrum sagittis. Nullam blandit eros eu auctor accumsan. Fusce enim mauris, ultricies et metus dapibus, lobortis imperdiet erat. Nunc id diam elit. Nullam non tellus ut quam convallis scelerisque.
```

```
CSS:
h1 {
  font-size: 2em;
  font-weight: bold;
  color: white;
}

body {
  background-color: black;
  color: white;
  margin: 0;
  padding: 0;
}

div {
  font-size: 0.8em;
  line-height: 1.5;
}
```

See the Pen [Pure CSS3 Off Canvas Menu](#) by Terryl (@Terryl_Brown) on CodePen.

The screenshot shows a dark-themed CodePen interface. At the top, there are tabs for 'HTML' and 'CSS' on the left, a 'Result' preview window in the center, and an 'EDIT ON CODEPEN' button on the right. Below the preview window, there is a horizontal navigation bar with four tabs: 'Tab One' (which is active), 'Tab Two', 'Tab Three', and 'Tab Four'. A large, semi-transparent white box covers the central area of the preview window. Inside this box, the title 'This is Panel One' is displayed in bold black font. Below the title, there is a block of placeholder text (Lorem ipsum) and two more paragraphs of text. The entire interface is set against a dark gray background.

Tab One Tab Two Tab Three Tab Four

This is Panel One

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Mauris vel leo sem. Sed nec quam sit amet lorem volutpat ullamcorper ut sed massa. Sed vel felis velit. Nullam et turpis sed dui auctor vehicula quis a dui.

Aliquam vitae leo et sapien volutpat accumsan quis eget turpis. Etiam ac metus vitae purus semper pretium. Curabitur id nisl nisl. Cras ut massa sed dolor ullamcorper consequat ut sed dolor.

Nam sodales, mi eu convallis adipiscing, ligula justo consectetur tellus, tincidunt vestibulum tortor elit a augue. Ut elementum ultricies orci, vel luctus neque varius in. Phasellus turpis nunc, eleifend ac fringilla at, malesuada in eros.

Accessibilità?

- Il toggle deve avere un attributo **aria-expanded** con lo stato corrente
- Il toggle deve avere un attributo **aria-controls** che indichi cosa controlla
- Nel caso di contenuto nascosto, l'elemento deve avere un attributo **aria-hidden** che ne indichi lo stato

Cattiva notizia:

Ci vuole javascript per farlo 😞

Buona notizia:

C'è un js minuscolo (600 Byte) che lo fa in automatico 😊

a11y-toggle

#2 :empty

```
div:empty {  
    border: red;  
}
```

```
<div></div> <!-- match -->  
  
<div><!-- match --></div>  
  
<div> </div><!-- nope -->  
  
<div>  
</div><!-- nope -->
```

Bello ma che ci faccio?

- Nascondere elementi vuoti
-
- Tipo quello qua sopra

```
li:empty {display: none}
```

- Nascondere elementi vuoti
- Tipo quello qua sopra

Segnalare errori

```
<div class="main"><!--Your generated by JS app will go here--></div>
```

```
.main:empty {  
    background: #e74c3c;  
    padding: 1em;  
    margin: 1em 0;  
    border-left: 5px solid #c0392b;  
}  
  
.main:empty::before {  
    content: "The app is unavailable now!"  
}
```

The app is unavaible now!

Utilizzarlo per gestire il
loading

```
<div class="main2"><!--Your generated by JS app will go here--></div>
```

```
.main2::empty::after {
  display: block;
  content: '';
  color: #ffffff;
  font-size: 90px;
  text-indent: -9999em;
  overflow: hidden;
  width: 1em;
  height: 1em;
  border-radius: 50%;
  margin: 72px auto;
  position: relative;
  transform: translateZ(0);
  animation: load6 1.7s infinite ease, round 1.7s infinite ease;
}
```

O perchè no, fare entrambe
le cose contemporaneamente!

In combo con :not

Load content

```
.main4:not(:empty) {  
  animation: empty-fade 1s, empty-translate-in 1s;  
}
```

#3 :target

`:target` è una CSS pseudo-class che seleziona un elemento univoco (l'elemento target) che abbia l'id che corrisponde a quello nell'url.

Già le vecchie ancore!

```
<a href="#pippo">Pippo Link</a>
<div id="pippo">PIPPO!!1!</div>
```

```
div:target {
    background: #E0168F;
    color: #fff;
}
```

See the Pen [target example](#) by Davide Di Pumbo (@MakhBeth) on CodePen.

Eh ma come la mettiamo
con il jump to?

```
<a href="#pippo">Pippo Link</a>
<div class="target" id="pippo"></div>
<div>PIPPO!!1!</div>
```

```
.target {
  position: fixed;
  top: 0; left: 0; }
div:target + div {
  background: #E0168F;
  color: #fff; }
```

Via di esempi reali!!!

All CSS Accordion

First Accordion

Second Accordion

Third Accordion

For multiple accordions on a single page, repeat process, but assign different id names. [Multiple accordions example](#)

Beware use on Android 2.2 and 2.3. The default browser on these versions does some curious things.

See the Pen [CSS Accordion](#) by pollardId (@pollardId) on [CodePen](#).

#4 :nth

Ci sono un sacco di trucchi che potete fare con:

- :nth-child
- :nth-of-type
- :nth-last-child
- E le combinazioni varie con ~ e +

```
ul li:nth-last-child(n+3), ul li:nth-last-child(n+3) ~ li { }
```

Try it out

Your quantity query will be reflected on the items below by a change in colour. Add and remove items to see the styling be applied when the query matches.

 ADD ITEM

 REMOVE ITEM

Quantity Queries

Un altro trucco che adoro è:

1. Item
2. Item
3. Item
4. Item
5. Item
6. Item
7. Item

```
ol li:nth-child(-n+5):nth-child(n+3) {  
    background: #E0168F;  
}
```

#5 :placeholder-
shown

Un semplice selettore che vi dice se il placeholder di un input è visibile o meno!

```
<input type="text" placeholder="Placeholder">  
<input type="text" placeholder="Placeholder" va
```

```
input {  
    border: 2px solid black;  
}  
  
input:placeholder-shown {  
    border-color: #E0168F  
}
```

Placeholder

Cose negative?

No serio, io non le ho trovate 😊

Siamo solo a
metà

Acceleriamo!

#7 currentColor

È una variabile sempre valorizzata con il valore della proprietà **color** corrente

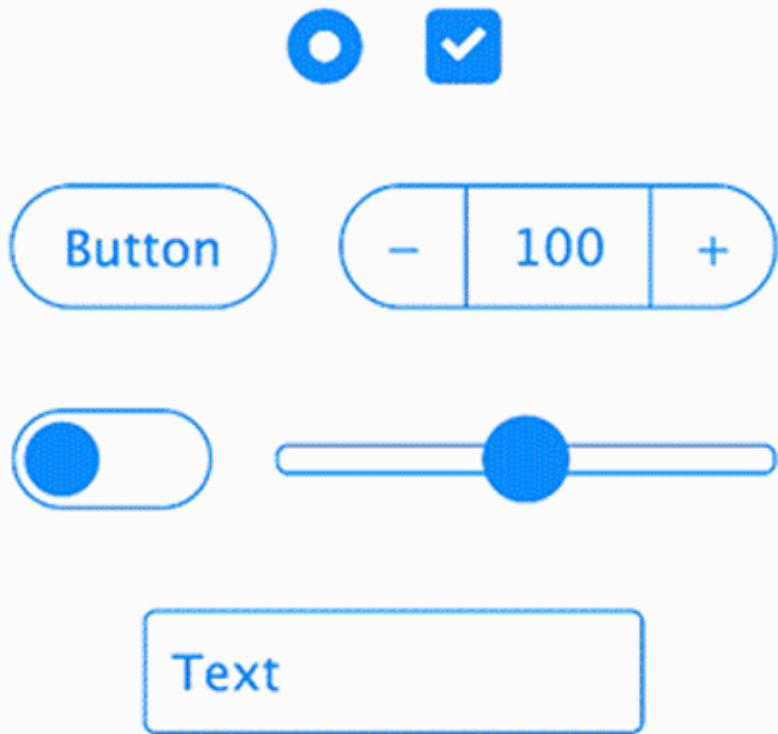

```
<div class="example-currentColor">Example</div>
<style>
  .example-currentColor{
    color: #E0168F;
    border-bottom: 0.5em solid currentColor;
    box-shadow: 0px 0px 1px currentColor;
  }
</style>
```

Example

Real life?

```
.example-currentColor-1 button {
  background: transparent;
  border: 2px solidcurrentColor;
}
.example-currentColor-1 button.info {
  color: #3498db;
}
.example-currentColor-1 button.success {
  color: #27ae60;
}
.example-currentColor-1 button.error {
  color: #c0392b;
}
```

```
<!DOCTYPE html>

Info ⓘ

Success ⓘ

Error ⓘ

```
.example-currentColor-1 svg {  
  fill:currentColor;  
}
```

#8 SVG path

Ci sono due proprietà **stroke-dasharray** e **stroke-dashoffset** che si riferiscono allo stroke di una svg

stroke-dasharray indica come tratteggiare la linea (un valore di 5 creerà dei dash di 5px distanziati da loro di 5px)

stroke-dashoffset indica da dove, dall'inizio dell'svg si inizia a tratteggiare.

```
<style>
  line.example-svg-1,
  line.example-svg-2 {
    stroke: white;
    stroke-width: 2;
    stroke-dasharray: 10;
  }
  line.example-svg-2 {
    stroke-dashoffset: 10;
  }
</style>
<svg width="600" height="40" viewBox="0 0 600 40" version="1.1" xmlns="http://www.w3.org/2000/svg">
  <line class="example-svg-1" x1="0" y1="10" x2="600" y2="10"></line>
  <line class="example-svg-2" x1="0" y1="20" x2="600" y2="20"></line>
</svg>
```

```
@keyframes example-svg-3 {  
  0% {  
    stroke-dashoffset: 600;  
  }  
  100% {  
    stroke-dashoffset: 0;  
  }  
}
```

Ma il mio esempio preferito?

- What a wonderful checkbox

Broken image

#9 Broken images

“Potete fare le UI più fighe dell'universo, ma quando si spacca un'immagine ve voglio vedè a fa i ganzi

Confucio

```
img { min-height: 50px; position: relative;
      display: inline-block; text-align: center; }

img::before, img::after {
  display: block; position: absolute;
  top: 50%; left: 50%;
  transform: translate(-50%, -50%); }

img:before {
  content: " ";
  height: 100%; width: 100%;
  background-color: #ecf0f1;
  border: 10px dashed currentColor; }

img:after {
  content: "😢 Image not available: " attr(alt);
  color: #7f8c8d; }
```

 Image not available:
Awesome stuff

Due cose:

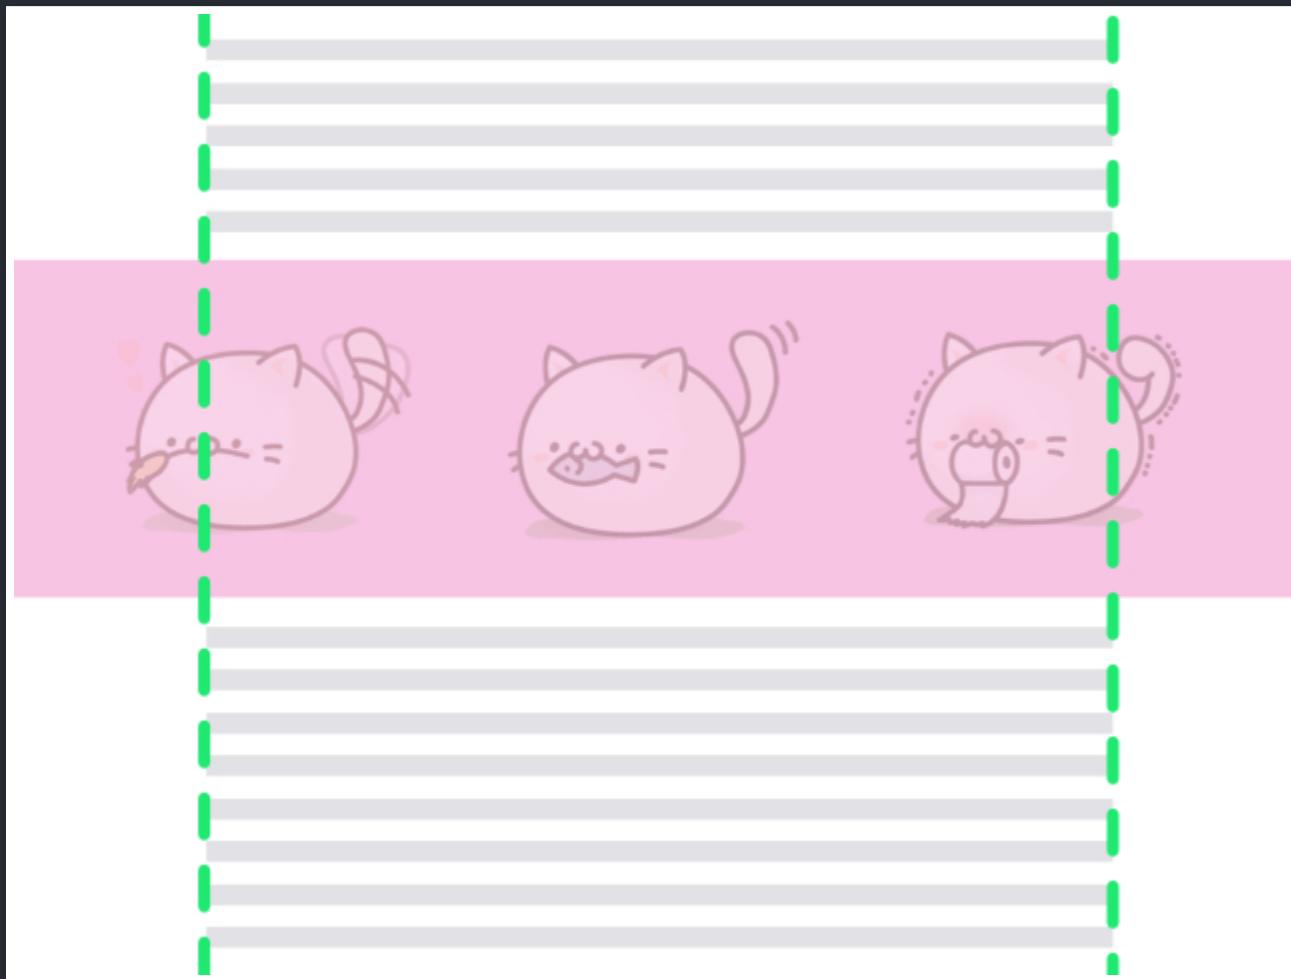

- `content: "..."; attr(alt);`
- Le brutte notizie

Sto trucco non funziona su IE e Safari...

#10 Escape the
cage

Cats are frome here

Consectetur adipisci elit. Morbi id semper quam. Ut sodales venenatis enim, eget vestibulum purus commodo non. Etiam convallis mi sapien, eu mollis velit aliquam ac. Sed fringilla quis ipsum eget pharetra. Nullam commodo ligula sed mattis ornare. Sed ullamcorper luctus diam vel vehicula. Nulla facilisi. Phasellus orci est, tempor et diam a, consectetur interdum metus. Aliquam erat volutpat. Praesent porttitor velit eu fringilla condimentum. Curabitur sed massa dignissim elit vulputate tincidunt in ac eros. Maecenas a elementum leo, ut elementum risus. Morbi id pulvinar turpis. Duis posuere sapien libero, et tempus neque consequat sit amet.

Sed lacus dolor, blandit et tempor at, consectetur luctus velit. Praesent a dapibus nunc. Duis vel orci vel justo sollicitudin accumsan. Proin convallis sapien ac arcu egestas vehicula. Maecenas nulla elit, volutpat eu nibh at, dictum fringilla dui. Aenean pharetra nisi feugiat rhoncus fringilla. Ut varius semper pharetra. Aenean non finibus ligula. Pellentesque consectetur ac quam ac sodales.

```
<div class="example-cage">
  <div class="e-container">
    Lorem Lorem ipsum dolor sit amet, consectetur adipiscing elit. Morbi
    <div class="our-div"></div>
    Sed lacus dolor, blandit et tempor at, consectetur luctus velit.
  </div>
</div>
```

Etiam convallis mi sapien, eu mollis velit aliquam ac. Sed fringilla quis ipsum eget pharetra. Nullam commodo ligula sed mattis ornare. Sed ullamcorper luctus diam vel vehicula. Nulla facilisi. Phasellus orci est, tempor et diam a, consectetur interdum metus. Aliquam erat volutpat. Praesent porttitor velit eu fringilla condimentum. Curabitur sed massa dignissim elit vulputate tincidunt in ac eros. Maecenas a elementum leo, ut elementum risus. Morbi id pulvinar turpis. Duis posuere sapien libero, et tempus neque consequat sit amet.

Sed lacus dolor, blandit et tempor at, consectetur luctus velit. Praesent a dapibus nunc. Duis vel orci vel justo sollicitudin accumsan. Proin convallis sapien ac arcu egestas vehicula. Maecenas nulla elit, volutpat eu nibh at, dictum fringilla dui. Aenean pharetra nisi feugiat rhoncus fringilla. Ut varius semper pharetra. Aenean non finibus ligula. Pellentesque consectetur ac quam ac sodales.

```
.our-div.free {
    width: 100vw;
    position: relative;
    left: 50%;
    transform: translateX(-50%);
}
```

Ci sono altre soluzioni che prevedono `calc` che potete trovare online, simili a:

```
.our-div.free {  
    margin: 0 calc(-50vh + 50%);  
}  
body, html {  
    overflow: hidden;  
}
```

Non le adoro a causa di quell'overflow hidden;

#11 Lavorare con
la legacy

Cambiate lavoro e:

```
<div class="col cols red big col-m-2 flex fortune clearfix"></div>
```

Combattere il male con il male

Potete raggruppare i selettori con caratteri non validi:

```
<div class="col-sm-6 col-md-2 red big"></div>
```

```
<div class="<br>[ #bootstrap col-sm-6 col-md-2 ]<br>[ #utility red big ]<br>my-selector<br>"></div>
```

```
./#utility {  
    border: 1px solid red !important;  
}
```

Avete paura del global scope?

Usate le emoji...

Le emoji sono selettori CSS validi

```
<style>.😺 {  
border: 2px solid #E0168F;  
color: white;  
padding: 5rem;  
text-align: center;  
</style>  
<div class="😺">😺</div>
```

E ricordate che prima del !important

Potete moltiplicare le classi
per aumentare la
specificità

```
<div class="example-double">Colore!</div>
<style>
  .example-double.example-double {
    background-color: #E0168F;
  }

  .example-double {
    background-color: red;
  }
</style>
```

Colore!

#12 Bonus track

Potete usare ::before e ::after con elementi autochiudenti che non effettuano replace

See the Pen [YEqavq](#) by Davide Di Pumbo (@MakhBeth) on CodePen.

Grazie ad un selettore come `a:not([href*="mio-sito.cool"])` potete segnalare tutti i link esterni al vostro sito

Link interno

Link a bellissimi siti di gatti

```
a:not([href*="localhost"]) {  
    color: red;  
}
```

Con le proprietà CSS `counters` potete numerare oggetti con il solo CSS

Un esempio reale?

#1 :empty

```
▼<h1 class="title">
  ▼<span class="counter">
    ... ::before == $0
    </span>
    <span class="code">:empty
    </span>
  </h1>
</section>
```

... div section section h1 span ::before

Styles Computed Event Listeners ➞

Filter :hov .cls -

```
.counter::before { black.css:3
  content: "#" counter(trick);
}
```
